

CERTIFIED EDUCATOR SPOTLIGHT

John Wilson

Computer Science Teacher at Park Slope Collegiate High School

“As a math teacher, I always struggled to provide timely feedback to my students. With CodeHS, the teacher tools allow me to provide feedback to almost every student submission on a daily basis.”

What does Read, Write, Code mean to you?

“Today’s generation of students is growing up in a world where software is ubiquitous. It is common for people to inherently trust “machines” and “computers” that provide information at the tap or swipe of a finger. An understanding of how software is created can lead to a healthy skepticism of the “black boxes” we rely on more and more.

Introducing students to the process of writing code promotes critical and analytical thinking while they gain a skill they may be able to apply in myriad ways in their work and personal lives.”
